

B5 T6-CONDITIONAL assignment dossier: the T-031 decision enactment (D1-A / D2-A / D3-A)

TECT verification-first repository · claim B5-BEYOND-LAYER-BOUND

first issued 2026-06-12 · this version issued 2026-06-12 · v1.0

1. Purpose and scope

Enactment record for the three T-031 operator verdicts (2026-06-12), with the promotion-grade devil’s-advocate pass. **Scope:** the B5 claim tier and its gate bookkeeping. **Not claimed:** B5 at T7; arbitrary non-lattice DR-2; any change to B1/B2.

2. The three verdicts and their enactments

D1-A (H-ADM-COH, lattice class): DISCHARGE re-affirmed and strengthened. The 2026-06-08 discharge (R-026 + R-027 + R-028, operator enacted) is re-affirmed with the 2026-06-12 evidence: R-026 is now T7-NTstandard (Lemma NT pinned in-bundle) and the R-028 residual (a) (subpolynomial- K sufficiency, previously asserted) is PINNED by the exhaustive applied check (2,644,976 sums, worst 0.250; enumerated $K_{\text{floor}} \leq 12$). H-ADM-COH remains a NON-LATTICE remainder / modelling frontier only.

D2-A (DR2-SHARE): re-scoped. The gate moves from “MOOT@lattice / OPEN@arbitrary” to RESCOPED-TO-T030-NONLOADBEARING: the C_{full} head theorem caps $T' \leq \lfloor 2\pi/\theta_{\min} \rfloor = 10$ elementarily (Lemma 2), so arbitrary- Q DR-2 is a frontier strengthening, not a hole; leaving the gate OPEN invited exactly that misreading.

D3-A (tier): B5 $\rightarrow$ T6 PROVED-CONDITIONAL on the explicit set

$$\mathcal{H}_{\text{B5}}^{\text{T6}} = \{\text{lattice-class H-ADM-COH discharged (D1-A); non-lattice remainder excluded (T-030)}\};$$

SC-SCOPE endpoint thinness accepted; sunset-limited joint $\times 1.040 > 1$ accepted as sufficient}.

Label: B5-BeyondLayer-T6Conditional-260612. NOT T7: the endpoint is structurally thin (sunset-capped at $\times 1.13$) and the non-lattice exhaustiveness is frontier bookkeeping.

3. Why T6 is now supportable (the T5-dossier ledger, re-inventoried)

T5-era weakness	2026-06-12 state
T4-grade lemmas in the chain	DR-2 T7-NTstandard; STEP-5B rectangle T6; tadpole gates R-U6-1/2 CLOSED (written proof + 8/8)
endpoint $\times 2.1$ thin	hardened $\times 2.6$ (J-refined); SC-SCOPE joint $\times 1.040\text{--}\times 1.082 > 1$ certified on $\mathcal{W}_{\text{SC}}$
SC-SCOPE marginal	T5 thin-CERTIFIED, published; tadpole struck, sunset-only
H-ADM-COH class pin	lattice class discharged (D1-A; residual (a) pinned)

4. Devil’s-advocate / self-adversarial review (promotion-grade; CLAUDE.md 6.3)

- (α) “The thinness acceptance is doing tier work: a $\times 1.04$ margin inside a T6 label.” VALID with mitigation: that is precisely why the acceptance is a NAMED HYPOTHESIS in $\mathcal{H}_{B5}^{T6}$, not a buried judgment – T6 PROVED-CONDITIONAL is the tier DEFINED for explicit named-hypothesis closures; removing the hypothesis (hardening the sunset accounting) is the registered T7 path.
- (β) “The estimate-grade third-cumulant inflation basis (GATES SC-SCOPE record) survives – does it block T6?” ADDRESSED: the certified joint ($\times 1.040$, Parseval-pinned $R_{\max} = 0.385 < 0.634$) replaced the estimate-grade pairing basis for the ENDPOINT closure; what remains estimate-grade is the off-endpoint all-orders FEASIBILITY ($I \leq 10^{-3}$, $\times 3.1\text{--}\times 20.7$), which the hypothesis set does not rely on. Within $\mathcal{W}_{SC}$ the chain is certificate-grade.
- (γ) “D1-A re-affirms a 2026-06-08 discharge – is the re-tier double-counting the same evidence?” DISMISSED: the T5 assignment (2026-06-06) PRE-DATES the discharge enactment, the lattice T7 confirmation, the NT pin, the certified endpoint joint, and the tadpole closure – every row of the Sec. 3 table is post-T5 evidence; nothing is counted twice.

Quantitative sanity check (mandatory). The promotion changes NO number: margins ($\times 55.6 / \times 8.8 / \times 2.1\text{--}2.6$), the certified joint ($\times 1.040\text{--}\times 1.082$), the threshold (1.59×10^5 vs $n_{\text{pack}} \approx 49$), and the R-028 margins ($\times 10.6\text{--}\times 15.8$) are the published-bundle values; the tier action is a classification of the EXISTING evidence under the TSv2 definition of T6 (theorem under explicit named hypotheses, each textbook or separately tracked – here: two acceptance hypotheses + two scope facts, all four registered).

5. Result footer

Result ID:	B5-BeyondLayer-T6Conditional-260612 (tier-assignment dossier, T-031 enactment)
Precise statement:	B5-BEYOND-LAYER-BOUND re-tiered T5 PINNED-CLOSURE -> T6 PROVED-CONDITIONAL on $H_{B5}^{T6} = \{\text{lattice-class H-ADM-COH}$ discharged; non-lattice remainder excluded (T-030); SC-SCOPE endpoint thinness accepted; sunset-limited joint $\times 1.040 > 1$ accepted}. D1-A: lattice discharge re-affirmed + residual (a) pinned (2.6M exhaustive check). D2-A: DR2-SHARE rescoped to T-030 non-load-bearing frontier.
Scope:	B5 claim tier + gate bookkeeping only. B1/B2 (T7-SCOPE_{C_full} given A1) unaffected. NOT T7 (endpoint structurally thin, sunset-capped; non-lattice = T-030).
Evidence grade:	TIER-ASSIGNMENT RECORD over published bundles + GATES records; promotion-grade devil’s-advocate pass included.
Reproduction command:	the three B5 published bundles’ entry manifests (8 + 1 + 4 scripts, 259 asserts).
Falsifier:	any H_{B5}^{T6} element failing (e.g. a recomputed joint ≤ 1 on $\mathcal{W}_{SC}$; a lattice competitor violating the discharged $G1'''$ -AE bound).
Tier before / after:	B5: T5 PINNED-CLOSURE -> T6 PROVED-CONDITIONAL (operator verdicts D1-A/D2-A/D3-A, 2026-06-12).
No-overclaim statement:	T6-CONDITIONAL, not T7; the acceptance

hypotheses are named, not buried; arbitrary
non-lattice DR-2 remains OPEN (T-030).
Next required action: T7 path (optional): harden the sunset
endpoint beyond thin OR close T-030.
Mainline: T-031 CLOSED as decision layer.
