

Referee package (DRAFT) – migration and full re-validation of the enumerated-reading evidence chain (batch 2, 167/167)

TECT verification-first repository · claim B1-RH-ENUM

first issued 2026-06-10 · this version issued 2026-06-11 · v1.1

1. Purpose and scope

This referee document records the MIGRATION and full re-validation of the enumerated-reading evidence chain (migration batch 2) into the verification-first repository. **Scope:** provenance and reproducibility of the migrated enumerated-reading results. **Not claimed:** no new theorem; this certifies that the migrated chain re-executes identically.

2. The result

The migration batch-2 evidence chain is migrated verbatim and re-validated by full re-execution: 167/167 checks pass. The enumerated-reading results therefore carry an unbroken, re-runnable provenance trace under the current governance.

3. Structure of the argument

The legacy enumerated-reading scripts are migrated with their constants and re-executed end-to-end; the *u*-series mainline checks (`t6_mainline_useries_checks`) reproduce all 167 asserts. The chain's claim-to-evidence links are re-established in the ledger.

4. Numerical reproduction

The mainline *u*-series check script reproduces the 167/167 result; run it from the bundle and compare against `expected/`. The expected output is 167/167 checks PASS, reproducible by an external referee from a clean checkout.

5. Devil's-advocate / self-adversarial review (CLAUDE.md 6.3)

- (α) *Attack the scope.* The result is confined to the scope stated in Sec. 1; a referee may push that boundary, which is fair — the package makes no claim outside it, and the precise scope is in the footer.
- (β) *Attack the tier / over-claim.* No prose here is stronger than the registered grade (footer no-overclaim line); the status is REVIEW DRAFT, NOT operator-confirmed, and the claim-ledger tier is the arbiter.

- (γ) *Attack reproduction / self-containment*. Each reproduction script carries self-test asserts and ships in the folder's bundle with its transitive dependencies (imports and runtime file reads, resolver v1.3.0); a referee runs them and diffs against `expected/`.

Quantitative sanity check (mandatory): the falsifier (footer) is concrete and pre-registered, so the claim is refutable by a single explicit construction; and the numerical values it cites are reproduced by the folder's scripts (all asserts pass).

6. Result footer

Result ID:	B1-RH-ENUM / enumerated referee package (DRAFT)
Precise statement:	The enumerated-reading evidence chain (migration batch 2) is migrated verbatim and re-validated by full re-execution: 167/167 checks pass; the results carry a re-runnable provenance trace.
Scope:	provenance + reproducibility of the migrated enumerated-reading chain. Re-validation record.
Evidence grade:	migration re-validation (167/167 EXECUTED).
Expected output:	167/167 checks PASS (clean checkout).
Reproduction command:	python codes/vacuum/t6_mainline_useries_checks.py
Falsifier:	any of the 167 checks failing on re-execution from a clean checkout.
Tier before / after:	DRAFT referee package; provenance record. DRAFT ACCEPTED (operator 2026-06-11); published-bundle confirmation HELD.
No-overclaim statement:	a migration/re-validation record, not a new mathematical result.
Next required action:	inspect 1-script reproduction bundle (167/167) -> operator PUBLISHED confirm.
